

KEVIN OLMO

BUSINESS INTELLIGENCE & PROCESS ANALYTICS LEADER

Orlando, FL | 787-234-3668 | karamosolmo@alumni.fullsail.edu
linkedin.com/in/kevinramosolmo | Portfolio

PROFESSIONAL SUMMARY

Business intelligence and operations analytics leader who converts frontline workflows into governed reporting, automation, and measurable process improvement. Built a warehouse-wide Power BI architecture supporting 50-70 associates, three supervisors, and five departments; delivered SAP automation, Power Apps/SharePoint workflows, and cross-functional operating systems used in daily management. Combines requirements gathering, data modeling, executive communication, change adoption, and hands-on operations leadership to move solutions from analysis into sustained use.

CORE EXPERTISE

Business Intelligence: Power BI, DAX, Power Query (M), semantic modeling, star schema, KPI architecture, executive dashboards, trend and exception analysis

Data & Systems: SQL, ETL, SAP, SharePoint, Microsoft Excel, data quality, effective-dated dimensions, reporting governance

Automation & Improvement: Power Apps, SAP GUI scripting, VBScript, workflow design, process mapping, root-cause analysis, standard work

Leadership: Requirements gathering, stakeholder management, workforce planning, coaching, cross-training, change adoption, Agile/Scrum

PROFESSIONAL EXPERIENCE

THALES AVIONICS | Logistics Supervisor | Orlando, FL

January 2024 - Present

- Designed and deployed the organization's first warehouse-wide Power BI KPI and reporting architecture, supporting 50-70 associates, three supervisors, and leadership across Receiving, Put Away, Order Fulfillment, Packing, and Shipping.
- Built a shared semantic model and 18 management/supervisor report pages using Power Query, DAX, star-schema principles, effective-dated workforce logic, standardized targets, SAP mappings, and role-specific decision views.
- Consolidated SAP, SharePoint/Excel, workforce, KPI, and scorecard inputs into refreshed executive, manager, supervisor, audit, compliance, and operational-control reporting used for prior-day reviews and exception investigation.
- Developed a Power Apps and SharePoint forklift-request queue that logged 2,742 requests across five departments; 2,564 were completed with a 19-minute median recorded completion time, improving coordination and reducing workflow interruptions.
- Created production SAP GUI/VBScript helpers for repair-station issuing and transfer-order workflows; reduced practitioner-estimated error-free processing from 30-60 seconds to under 10 seconds per line and supported recovery of about 200 orders / 400 lines after an outage.
- Transformed a task-siloed group into a 14-person cross-functional team able to support core departmental workflows with minimal daily supervision; coached talent into Master Scheduling, Operations Specialist, higher-level, and future-lead opportunities.
- Built a SharePoint-centered operating hub for job aids, training videos, communications, audit controls, schedules, working tools, and automation assets; increased adoption by iterating through frontline feedback and peer-led improvement.
- Digitized material tracking during an SAP migration blackout, replacing paper records with a shared Excel/SharePoint process that supported completion of a wall-to-wall warehouse audit within five days.

SELECTED BUSINESS INTELLIGENCE & AUTOMATION PORTFOLIO

- **Warehouse Intelligence System** - Governed Power BI architecture connecting executive, manager, supervisor, and analyst decisions through shared KPI definitions and role-specific reporting.
- **SAP Repair-Station Automation** - Guided multi-order scan interface spanning issuing, transfer-order creation and confirmation, exception controls, and final transaction summaries.
- **Forklift Request System** - Power Platform service queue that converted informal operator searches into a measurable, asynchronous workflow used across five departments.

PROFESSIONAL EXPERIENCE - CONTINUED

THE SELECT GROUP | **Scrum Master - Business Intelligence Delivery**

May 2023 - January 2024

- Coordinated cross-functional technical and business teams delivering reporting, analytics, and data-focused initiatives; facilitated daily execution tracking, removed blockers, and maintained alignment on priorities and dependencies.
- Partnered with reporting teams to validate output accuracy, usability, and stakeholder alignment, and communicated delivery progress, risks, and next steps to senior leadership, including CIO-level stakeholders.

TOPBUILD | **Database Administrator / BI Coordinator**

June 2023 - August 2023

- Translated stakeholder reporting needs into structured data outputs and Power BI visualization requirements while supporting ETL activity and data-integrity checks across systems.
- Created user-activity tracking, resolved Jira incidents, and used Excel-based analysis to identify and eliminate duplicate records, improving data quality and operational visibility.

AMAZON | **Operations Manager** | Groveland, FL

May 2022 - May 2023

- Led daily operations for 80+ associates and three shift leaders in a high-volume fulfillment environment; improved productivity by approximately 30% through labor planning, workforce optimization, and flow management within 15-minute operating intervals.
- Consistently achieved 100% WIP interval compliance through active workload balancing and flow management, compared with a reported peer range of approximately 60%-70%.
- Standardized monthly inventory tracking in Excel and reinforced transaction accountability, helping inventory accuracy reach 95% while making recurring gaps visible for coaching and corrective action.

ADDITIONAL EXPERIENCE

Implementation Coordinator - TTEC, 2021-2022 | **Senior Warehouse Associate** - AmerisourceBergen, 2017-2021 | **Assistant Manager** - McDonald's, 2015-2017

GRADUATE ANALYTICS & RESEARCH

- Completed an independent Google data-governance strategy case using PESTEL/SWOT analysis, governance gap assessment, CRISP-DM, implementation planning, monitoring design, and a three-year cost-benefit scenario.
- Graduate portfolio spans enterprise data management, ETL, dimensional modeling, forecasting, data mining, visualization, systems thinking, and evidence-based decision communication.

EDUCATION & CERTIFICATION

Master of Science, Business Intelligence - Full Sail University, Orlando, FL

Bachelor of Science, Music Business - Full Sail University, Orlando, FL

Google Data Analytics Professional Certificate - Google / Coursera, October 2023
